File & Directory Basics

Path Types

- **Absolute path** → `/home/user/file.txt`
- **Relative path** → `file.txt`, `./file.txt`, `../file.txt`

Basic Commands

- `uname` → system info
- `ls -ltr` → long list sorted by time
- `ls -la` → hidden files + details
- `touch file.txt` → create file
- `cat file.txt` → view file
- `cat > file.txt` → overwrite file
- `cat >> file.txt` → append file

File Operations

- `rm file` → delete file
 - `rmdir folder` → remove empty directory
 - `cp source dest` → copy
 - `mv source dest` → move/rename
 - `head file` → first lines
 - `tail file` → last lines
-

Download & Search Tools

- `wget url` → download files

- `curl url` → fetch data

Search Tools

- `grep "text" file` → search text
- `cut -d ":" -f1` → split by delimiter
- `awk` → advanced processing

Examples

```
awk -F ":" '{print $NF}'  
awk -F ":" '$3>=1000 {print $1, $3}'
```

Vim Editor (Important)

Open file

```
vim filename
```

Colon Mode Commands

- `:q` → quit
- `:wq` → save & quit
- `:q!` → force quit
- `:set nu` → show line numbers
- `:10` → go to line
- `:/word` → search top → bottom
- `:?word` → search bottom → top
- `:%d` → delete entire file
- `:noh` → remove highlight

Replace

- `:10s/old/new`
- `:10s/old/new/g`
- `:%s/old/new/g`

Normal Mode (Esc)

- `gg` → top of file
- `G` → bottom of file
- `u` → undo

- `Ctrl + r` → redo
- `dd` → delete line
- `yy` → copy line
- `p` → paste below
- `P` → paste above

Example

User Management (Linux)

Concepts

- **User** → individual account
- **Group** → collection of users
- **Permissions** → access control

User Commands

```
useradd ramesh
id ramesh
cat /etc/passwd
cat /etc/group
```

Group Commands

```
groupadd devops
usermod -g devops ramesh
usermod -aG testing ramesh
```

Password

```
passwd ramesh
```

SSH Config

- File: `/etc/ssh/sshd_config`
- Validate:

```
sshd -t
```

Sudo Access

- File: `/etc/sudoers`

Remove user from group

```
gpasswd -d ramesh devops
```

Delete user

```
userdel -r ramesh
```

Best Practice Steps

1. Lock user
2. Remove from all groups
3. Backup home directory
4. Delete user

Tar Command (Archiving)

Create archive

```
tar -cf file.tar folder/
```

Extract archive

```
tar -xf file.tar
```

gzip compressed archive

```
tar -czf file.tar.gz folder/  
tar -xzf file.tar.gz
```

Quick Revision Summary

- File handling → `cp`, `mv`, `rm`, `cat`
- Search → `grep`, `cut`, `awk`
- Vim → editing + navigation + replace
- Users → `useradd`, `usermod`, `groupadd`
- Security → `sudo` + `ssh` config
- Archive → `tar -cf`, `tar -xzf`
